Jensen Huang, founder of Nvidia, says his controversial move for the UK chip designer will secure its future.

The supply of the semiconductor, the raw material that inside every computer is part of every computer, is a global problem that has been made worse by the coronavirus pandemic. The problem is not just about the availability of chips, but also about the ability to produce them. The US has been working on this problem for several years, but the UK has been working on it for even longer. The UK has a long history of chip-making, dating back to the 1960s, and has been working on it ever since. The UK has a long history of chip-making, dating back to the 1960s, and has been working on it ever since.
